

ENGLISH EDITION

WIRE DRIFT RACERS

X68000 Wireframe Battle Racing Instruction Manual

3 LAPS. 2 CARS. ONE WINNER.

A three-lap battle begins above the megacity

The year is 2088. High above the city, roads and machines are formed from lines of light. The new sport is called WIRE DRIFT.

— TAKE THE LINE

Pure speed is never enough.

— TAKE THE GATE

Dive for the boost-energy gate.

— TAKE THE RIVAL

Settle close battles with a drift tackle.

Complete three laps first, but expect a fight to the line

1 PLAYER

Drive the red P1 car against a blue CPU at LEVEL 1-5.

2 PLAYERS

Two drivers compete on one X68000; two pads are supported.

DEAD HEAT

Same 20 Hz finish = draw.

Choose a course on the way from title to START

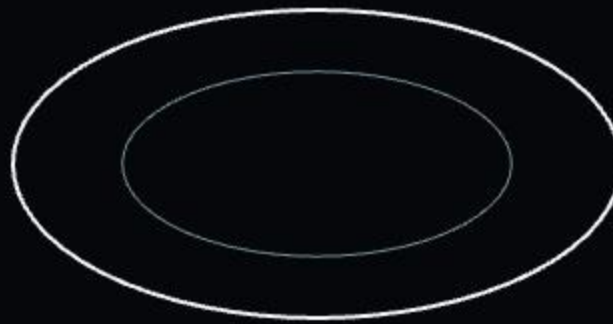

- 01** — Up/down selects 1P or 2P
- 02** — Left/right changes CPU LEVEL
- 03** — Confirm, then select a course
- 04** — Review controls, then READY

Choose one of three courses from rotating previews

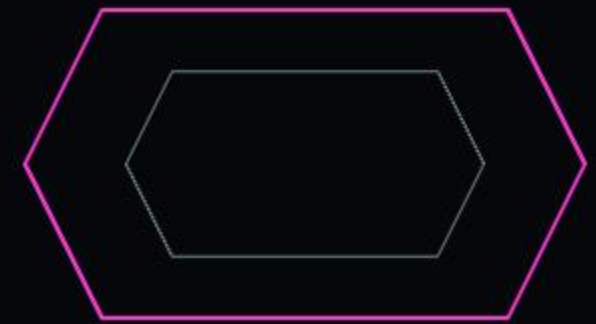

RING

Balanced classic ring
Learn gates, lines, and tackles

OVAL

Wide high-speed oval
Connect acceleration and boost
zones

PULSE

Three-apex technical loop
Read the next apex and gate early

LEFT / RIGHT SELECT SPACE / BUTTON 1 CONFIRM ESC TITLE

ALL COURSES: 3 LAPS / SAME PHYSICS / ACTIVE GATE / CATCH-UP BOOST

Learn each driver's controls on one side

ESC

RETURN TO TITLE DURING A RACE

The HUD tells you what to do next

Four rules decide every race

3 LAPS

Cross the start line in the forward direction to advance.

RESULT

Winner and lap counts remain visible for about five seconds.

INPUT RELEASE

The return timer waits until finish-line inputs are released.

ESC

Return to title during a race; the title never exits to darkness.

Gates and boost reshape the racing line

BOOST

Break past normal speed 320 toward boost speed 512 at acceleration 32. The car brightens while the gauge drains.

ACTIVE GATE

Three gates light in an inner, center, or outer lane. First arrival earns boost; the claimed gate stays dark for about three seconds.

Contact is not an accident; it is a comeback weapon

DRIFT TACKLE

Drift toward the rival while touching to push the car across the lane. Rail contact causes extra slowdown, but the attacker also loses speed.

CATCH-UP BOOST

A trailing car slowly recovers boost as the gap grows. Speed is never automatic; the driver decides where to spend the energy.

CPU LEVEL 1 2 3 4 5

SAME PHYSICS. DIFFERENT DECISIONS.

CPU LEVEL changes decision speed and aiming accuracy

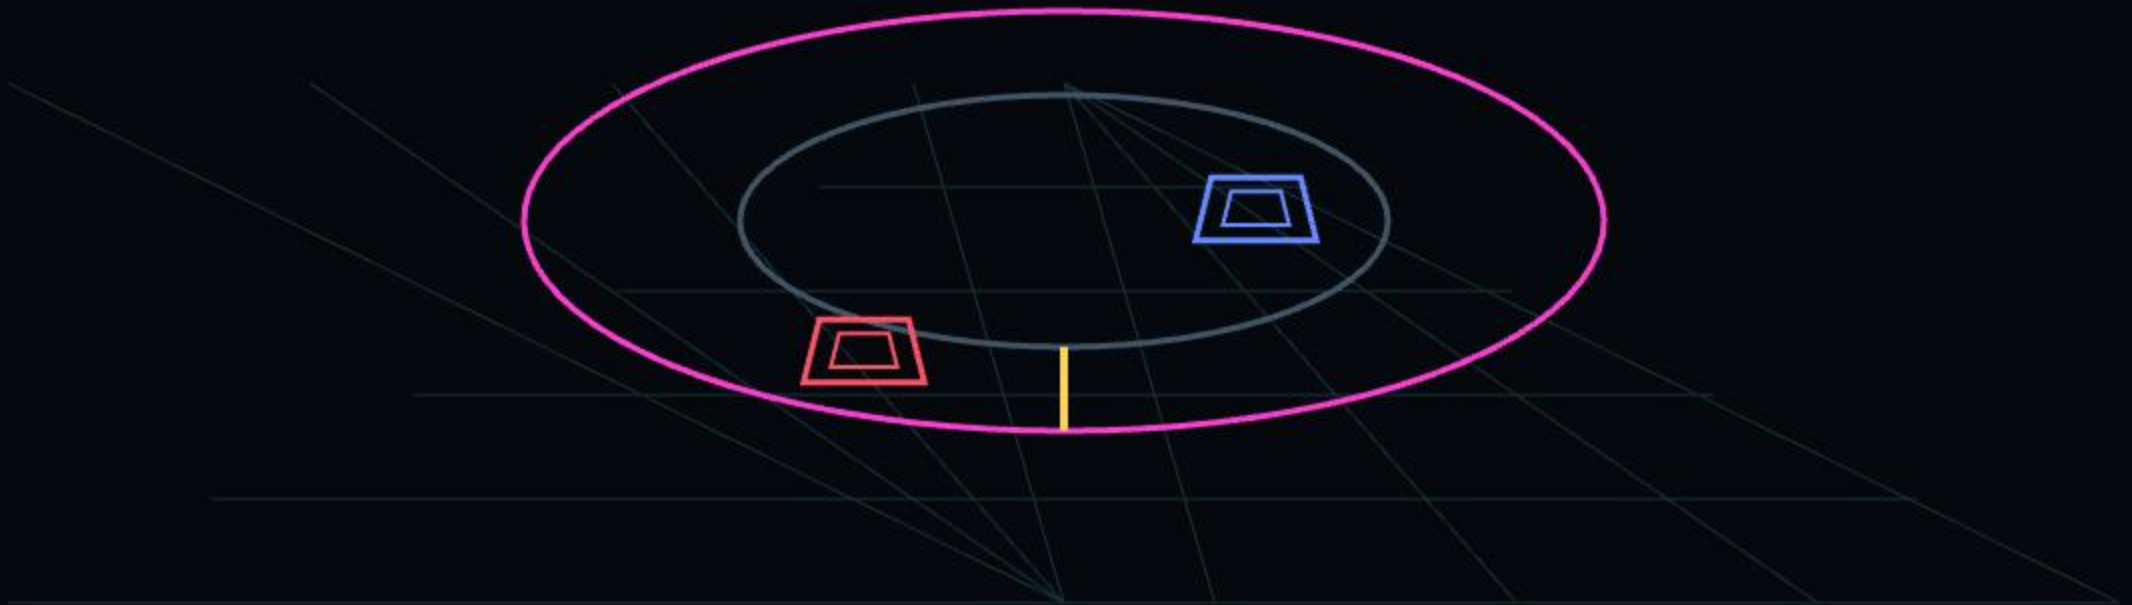

LEVEL	BEHAVIOR	RECOMMENDED
1	SLOW / WIDE ERROR	FIRST RACE
2	SHORT BOOSTS	PRACTICE
3	STANDARD	NORMAL
4	FAST / LONG BOOSTS	ADVANCED
5	FAST / ACCURATE	CHALLENGE

The CPU limits boost while far ahead. Every level shares the same speed limits and race rules.

02

PART 2 / RACING GUIDE

Win by combining the line, the gate, and controlled contact.

LINE / GATE / TACKLE / BOOST

Start in the center and read the next gate early

CENTER

Stay central after START to cover both inner and outer gates.

LOOK AHEAD

Read the next gate, not only the rival. Late drifts cost speed.

BRAKE

Use it to shape spacing, alter gate timing, or evade a tackle.

Use short boosts for re-acceleration and pursuit

01 SHORT BURSTS

Spend energy after corners or contact, not all at once.

02 SAVE FOR GATES

Keep enough energy to accelerate after a lane fight.

03 USE RECOVERY

When catch-up refill begins, pulse it to close the gap.

Gate strategy means knowing what to take and what to skip

— ONE AHEAD

Skip a distant gate and prepare for the next one.

— ENTER THE LANE

Share the rival's line to create a tackle chance.

— RETURN CENTER

While a gate is dark, reset for the next lane.

DRIFT TACKLE

MAXIMUM EFFECT AT THE RAIL. LEADERS CAN
YIELD THE LANE.

The moment you catch the leader is your best opening

TAKE INSIDE

Arrive inside, then push the leader toward the outer rail.

WATCH CPU REST

Use your boost after the CPU ends its own burst.

LEVEL 4-5

Mix skipped gates, rail tackles, and catch-up recovery; do not race on speed alone.

2 PLAYERS

- > Two gamepads are recommended when keyboard combinations ghost
- > A tackle can be worth more than a gate against a full boost gauge
- > A same-update finish is a DEAD HEAT; race through the final line

P1 W/S SPEED A/D DRIFT Q BOOST E BRAKE
P2 CURSOR SPEED/DRIFT N BOOST M BRAKE

GOOD LUCK, RACER.
